

Carefree Satin

Strong floor protection

Professional floor care made simple

- Natural satin finish
- Traffic resistant
- Long lasting smooth finish

Natural satin finish

Carefree Satin is a great choice for bringing out the natural beauty of your floor where shine is not required. The low gloss finish reduces the visible effects of traffic marks and scuffs that quickly ruin high gloss floor finishes. Safe to use on thermoplastic, vinyl, rubber, stone and composite floors with outstanding results on linoleum. It may also be used on sealed wood and cork floors.

Traffic resistant

Carefree Satin is formulated from an optimal blend of polymers, waxes and resins to provide a durable and outstanding hard finish. With strong resistance to marking and scuffing as well as a low gloss finish, the dynamic combination reduces the need for floor maintenance. This ultra low maintenance saves labour by as much as 50%.

Long lasting smooth finish

Easy to apply and quick to dry, Carefree Satin gives a consistent long lasting smooth finish on a wide range of floors. Simply dust mop or damp mop for easy maintenance.

Usage instructions

Each 5 litres of Carefree Satin polishes up to 500m².

Step One: Prepare the floor

Prepare the floor by stripping with Carefree Speed Stripper (not suitable for wood floors) or Carefree Stripper. Ensure slurry is removed and the floor is thoroughly clean and dry.

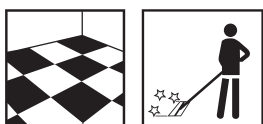

Step Two: Protect the floor

Leaving a six inch gap from the wall, apply a thin even coat of Carefree Satin using a figure of 8 motion with a clean mop or applicator. Allow to dry thoroughly (approximately 30 minutes).

Apply second and where necessary subsequent coats at 90° to the preceding coat. Allow each coat to fully dry before re-application. On the final coat, apply the polish up to the skirting board.

Step Three: Maintain the floor

Regularly maintain the floor by damp mopping, machine scrubbing or spray cleaning. The ideal maintenance product to use is Carefree Maintainer.

Carefree Satin

Technical data

Appearance	Opaque, milky liquid	Dilution rates	No dilution required
pH	8.5-9.0		

The above data is typical of normal production and should not be taken as a specification.

Product	Pack size	Cases per layer	Cases per pallet	Article code
