

Product Specifications

HypaPlast Blue Catering Plasters, Assorted (Pack of 100)

- Essential for catering, food preparation, food manufacturing and food handling applications
- High quality hypoallergenic plasters
- Individually wrapped and sterile
- Metal detectable
- Washproof

Plasters are the most used first aid supplies in the food industry. HypaPlast Blue Catering Plasters are essential for food industry environments, including food manufacturing, preparation and handling, where 'blue items' are a must - helping you to comply with food hygiene legislation. This is because no foods are naturally blue, and blue plasters are therefore more visible if they fall into food than other coloured plasters. They also include a metal detectable strip to facilitate automated hygiene checks. These plasters have great resistance to water and other liquid and the quality adhesive ensures that plasters will not lift, even when exposed to some of the cleaning processes used in the food industry. These Blue Catering Plasters also offer maximum comfort and flexibility with a variety of sizes and shapes in each pack. The Assorted Pack of 100 contains an assortment of 100 plasters in 5 different shapes, whereas the Assorted Pack of 20 contains a range of 20 plasters in 2 different shapes. HypaPlast Blue Catering Fingertip plasters are designed specifically for the food industry to keep any wounds dry and sterile, protecting food products from contamination in the process.
