- Essential for catering and food handling applications
- High quality hypoallergenic plasters
- Individually wrapped and sterile
- Metal detectable
- Washproof

Pack of 100 blue, washproof and detectable plasters all in the size 7.2x2.5cm. HypaPlast Blue plasters are specially designed for use in the food industry. When preparing, manufacturing or handling food, all efforts must be taken to prevent contamination. If a plaster were to be dropped into food, this would pose a serious health risk to consumers as well as causing serious reputational damage. HypaPlast blue plasters help prevent this as blue is not a colour found naturally in foods. This makes them easy to spot should the worst happen and the plaster, or parts of it, enter food. As well as being easily spotted, the plasters include a metal strip so they can be detected during automated food manufacturing safety processes. These plasters are washproof, meaning that although they cannot withstand complete immersion in water, they are suitable for workers who wash their hands regularly, such as chefs.
